Curve Warning Signs

Name _____

Date _____

Score _____

You are traveling at 50mph when you first see this sign. What action will you take and why?

You are traveling at 50mph on a clear sunny day when you first see this sign. What speed should you travel when you enter this curve and why?

You are traveling 45mph behind a very large truck at the same speed. You and the truck are approaching this curve. What do you predict may happen at the speed the truck is traveling? What action will you take?

WORK SHEET Answer Key

Module 4.2

Curve Warning Signs

You are traveling at 50mph when you first see this sign. What action will you take and why?

Reduce speed to 20 mph before entering the curve, target as far into the curve as possible, use lane position 1 to provide separation from oncoming traffic and right side of the road that has any line of sight restrictions.

You are traveling at 50mph on a clear sunny day when you first see this sign. What speed should you travel when you enter this curve and why?

Reduce speed to 25mph because the warning speed advisory indicates this is a sharp curve and the safer speed is 25mph.

You are traveling 45mph behind a very large truck at the same speed. You and the truck are approaching this curve. What do you predict may happen at the speed the truck is traveling? What action will you take?

Predict the truck is not going to reduce speed. The sign warns trucks could tip over if the speed exceeds 35mph. Predict the truck could roll, reduce my speed and create a much larger following distance that will permit more time and space to react.
